### **Product description**

This is a two component polyamine cured pure epoxy coating. It is a fast drying, abrasion resistant, high solids, high build product. Designed as a universal, all round, all year, new building coating where fast dry to handle is required. Can be used as primer, mid coat, finish coat or as single coat system in atmospheric and immersed environments. Suitable for properly prepared carbon steel, galvanised steel, shop primed steel, stainless steel, aluminium and concrete substrates. It can be applied at sub zero surface temperatures.

#### **Typical use**

Marine:

Exterior and interior areas, including outside hulls, superstructures, decks, cargo holds and water ballast tanks.

Protective:

Recommended for offshore environments, including splash zones, refineries, power plants, bridges, buildings, mining equipment and general structural steel.

#### **Approvals and certificates**

Approved for PSPC for Water Ballast Tanks according to IMO Res. MSC 215(82)

When used as part of an approved scheme, this material has the following certification: - Low Flame Spread in accordance with EU Directive for Marine Equipment. Approved in accordance with parts 5 and 2 of Annex 1 of IMO 2010 FTP Code, or Parts 5 and 2 of Annex 1 of IMO FTPC when in compliance with IMO 2010 FTP Code Ch. 8

Consult your Jotun representative for details.

Additional certificates and approvals may be available on request.

#### Colours

aluminium, aluminium red toned, aluminium lumi, buff, red, grey

### **Product data**

| Property              | Test/Standard                                                             | Description        |

The provided data is typical for factory produced products, subject to slight variation depending on colour. All data is valid for mixed paint.

Gloss description: According to Jotun Performance Coatings' definition.

Date of issue: 4 March 2018

This Technical Data Sheet supersedes those previously issued.

### Film thickness per coat

#### Typical recommended specification range

| Dry film thickness         | 75  | - | 300 | μm   |
|----------------------------|-----|---|-----|------|
| Wet film thickness         | 105 | - | 415 | μm   |
| Theoretical spreading rate | 9.6 | - | 2.4 | m²/l |

For DFT below 150  $\mu$ m thinner should be added.

Maximum recommended film thickness is often exceeded in overlap zones and in difficult-to-spray areas.

## Surface preparation

To secure lasting adhesion to the subsequent product all surfaces shall be clean, dry and free from any contamination.

#### Surface preparation summary table

|                   | Surface preparation                                                                                                                                                                                                         |                                                                                                                                                                                                                                        |  |

| Galvanised steel  | The surface shall be clean, dry and appear with a rough and dull profile.                                                                                                                                                   | Light brush blasting using non-<br>metallic abrasive leaving a clean,<br>rough and even pattern.                                                                                                                                       |  |
| Shop primed steel | Dry, clean and intact shop primer.                                                                                                                                                                                          | Abrasive swept or alternatively blasted to Sa 2 (ISO 8501-1) of at least 70 % of the surface.                                                                                                                                          |  |
| Coated surfaces   | Clean, dry and undamaged compatible coating (ISO 12944-4 6.1.4)                                                                                                                                                             | Sa 2½ (ISO 8501-1)                                                                                                                                                                                                                     |  |
| Concrete          | Low pressure water washing to a rough, clean, dry and laitance free surface.                                                                                                                                                | Minimum 4 weeks curing. Moisture<br>content maximum 5 %. Prepare the<br>surface by means of enclosed blast<br>shot or diamond grinding and other<br>appropriate means to abrade the<br>surrounding concrete and to remove<br>laitance. |  |

Optimum performance, including adhesion, corrosion protection, heat resistance and chemical resistance is achieved with recommended surface preparation.

Date of issue: 4 March 2018

This Technical Data Sheet supersedes those previously issued.

### **Application**

#### **Application methods**

The product can be applied by

| Spray:  | Use airless spray.                                                                                                                  |
|---------|-------------------------------------------------------------------------------------------------------------------------------------|
| Brush:  | Recommended for stripe coating and small areas. Care must be taken to achieve the specified dry film thickness.                     |
| Roller: | May be used for small areas. Not recommended for first primer coat. Care must be taken to achieve the specified dry film thickness. |

#### Product mixing ratio (by volume)

| Jotacote Universal Comp A | 3 part(s) |
|---------------------------|-----------|
| Jotacote Universal Comp B | 1 part(s) |

#### **Thinner/Cleaning solvent**

Thinner: Jotun Thinner No. 17

#### Guiding data for airless spray

| Nozzle tip (inch/1000):       | 17-23            |
|-------------------------------|------------------|
| Pressure at nozzle (minimum): | 150 bar/2100 psi |

# **Drying and Curing time**

| Substrate temperature     | -10 °C | -5 °C | 0 °C | 5 °C | 10 °C | 23 °C | 40 °C |
|---------------------------|--------|-------|------|------|-------|-------|-------|
| Surface (touch) dry       | 36 h   | 20 h  | 14 h | 8 h  | 5 h   | 2.5 h | 1 h   |
| Walk-on-dry               | 4 d    | 48 h  | 30 h | 16 h | 10 h  | 5 h   | 2 h   |
| Dry to over coat, minimum | 42 h   | 24 h  | 18 h | 10 h | 7 h   | 4 h   | 2 h   |
| Dried/cured for service   |        |       | 21 d | 14 d | 10 d  | 7 d   | 3 d   |
| Dried/cured for immersion | 10 d   | 7 d   | 4 d  | 3 d  | 2 d   | 1 d   | 12 h  |

For maximum overcoating intervals, refer to the Application Guide (AG) for this product.

Drying and curing times are determined under controlled temperatures and relative humidity below 85 %, and at average of the DFT range for the product.

Surface (touch) dry: The state of drying when slight pressure with a finger does not leave an imprint or reveal tackiness.

Walk-on-dry: Minimum time before the coating can tolerate normal foot traffic without permanent marks, imprints or other physical damage.

Dry to over coat, minimum: The recommended shortest time before the next coat can be applied.

Date of issue: 4 March 2018

This Technical Data Sheet supersedes those previously issued.

## Technical Data Sheet Jotacote Universal

Dried/cured for service: Minimum time before the coating can be permanently exposed to the intended environment/medium.

Dried/cured for immersion: Minimum time before the coating can be permanently immersed in sea water.

## **Induction time and Pot life**

| Paint temperature | 23 °C  |
|-------------------|--------|
| Induction time    | 10 min |
| Pot life          | 1.5 h  |
|                   |        |

### **Heat resistance**

|                     | Temperature |        |  |
|---------------------|-------------|--------|--|
|                     | Continuous  | Peak   |  |
| Dry, atmospheric    | 120 °C      | 140 °C |  |
| Immersed, sea water | 50 °C       | 60 °C  |  |

Peak temperature duration max. 1 hour.

The temperatures listed relate to retention of protective properties. Aesthetic properties may suffer at these temperatures.

Note that the coating will be resistant to various immersion temperatures depending on the specific chemical and whether immersion is constant or intermittent. Heat resistance is influenced by the total coating system. If used as part of a system, ensure all coatings in the system have similar heat resistance.

## **Product compatibility**

Depending on the actual exposure of the coating system, various primers and topcoats can be used in combination with this product. Some examples are shown below. Contact Jotun for specific system recommendation.

| Previous coat:   | inorganic zinc silicate shop primer, epoxy, zinc epoxy, zinc silicate                     |
|------------------|-------------------------------------------------------------------------------------------|
| Subsequent coat: | acrylic, alkyd, epoxy, polyurethane, polysiloxane, vinyl epoxy, epoxy mastic, vinyl epoxy |

# Packaging (typical)

|                           | Volume   | Size of containers |  |  |
|---------------------------|----------|--------------------|--|--|
|                           | (litres) | (litres)           |  |  |
| Jotacote Universal Comp A | 15       | 20                 |  |  |
| Jotacote Universal Comp B | 5        | 5                  |  |  |

The volume stated is for factory made colours. Note that local variants in pack size and filled volumes can vary due to local regulations.

### Storage

Date of issue: 4 March 2018

This Technical Data Sheet supersedes those previously issued.

## Technical Data Sheet Jotacote Universal

The product must be stored in accordance with national regulations. Keep the containers in a dry, cool, well ventilated space and away from sources of heat and ignition. Containers must be kept tightly closed. Handle with care.

#### Shelf life at 23 °C

Jotacote Universal Comp A Jotacote Universal Comp B 48 month(s) 24 month(s)

In some markets commercial shelf life can be dictated shorter by local legislation. The above is minimum shelf life, thereafter the paint quality is subject to re-inspection.

### Caution

This product is for professional use only. The applicators and operators shall be trained, experienced and have the capability and equipment to mix/stir and apply the coatings correctly and according to Jotun's technical documentation. Applicators and operators shall use appropriate personal protection equipment when using this product. This guideline is given based on the current knowledge of the product. Any suggested deviation to suit the site conditions shall be forwarded to the responsible Jotun representative for approval before commencing the work.

### Health and safety

Please observe the precautionary notices displayed on the container. Use under well ventilated conditions. Do not inhale spray mist. Avoid skin contact. Spillage on the skin should immediately be removed with suitable cleanser, soap and water. Eyes should be well flushed with water and medical attention sought immediately.

### **Colour variation**

When applicable, products primarily meant for use as primers or antifoulings may have slight colour variations from batch to batch. Such products may fade and chalk when exposed to sunlight and weathering.
